# **GitHub**GIT CHEAT SHEET

Git is the free and open source distributed version control system that's responsible for everything GitHub related that happens locally on your computer. This cheat sheet features the most important and commonly used Git commands for easy reference.

hướng dẫn xem sơ đồ git: mấy ô tròn (có thể có chữ c) là commit, xung quanh nó có thêm tên nhánh+head(con trỏ địa chỉ--> khôi phục,...)trỏ vào commit https://backlog.com --> trang t.v dễ hỉu

#### **INSTALLATION & GUIS**

With platform specific installers for Git, GitHub also provides the ease of staying up-to-date with the latest releases of the command line tool while providing a graphical user interface for day-to-day interaction, review, and repository synchronization.

#### **GitHub for Windows**

https://windows.github.com

#### **GitHub for Mac**

https://mac.github.com

For Linux and Solaris platforms, the latest release is available on the official Git web site.

#### Git for All Platforms

http://git-scm.com

#### **SETUP**

Configuring user information used across all local repositories

git config --global user.name "[firstname lastname]"
set a name that is identifiable for credit when review version history

git config --global user.email "[valid-email]"

set an email address that will be associated with each history marker

git config --global color.ui auto

set automatic command line coloring for Git for easy reviewing

#### **SETUP & INIT**

Configuring user information, initializing and cloning repositories

#### git init

initialize an existing directory as a Git repository

#### git clone [url]

retrieve an entire repository from a hosted location via URL

#### **STAGE & SNAPSHOT**

Working with snapshots and the Git staging area

#### git status

show modified files in working directory, staged for your next commit

#### git add [file]

add a file as it looks now to your next commit (stage)

#### git reset [file]

unstage a file while retaining the changes in working directory

#### git diff different

diff of what is changed but not staged

#### git diff --staged

diff of what is staged but not yet committed

#### git commit -m "[descriptive message]"

commit your staged content as a new commit snapshot

#### **BRANCH & MERGE**

Isolating work in branches, changing context, and integrating changes

#### git branch

list your branches. a \* will appear next to the currently active branch

#### git branch [branch-name]

create a new branch at the current commit

#### git checkout

switch to another branch and check it out into your working directory

#### git merge [branch]

merge the specified branch's history into the current one

#### git log

show all commits in the current branch's history

## ()

#### **INSPECT & COMPARE**

Examining logs, diffs and object information

git log

show the commit history for the currently active branch

git log branchB..branchA

show the commits on branchA that are not on branchB

git log --follow [file]

show the commits that changed file, even across renames

git diff branchB...branchA

show the diff of what is in branchA that is not in branchB

git show [SHA]

show any object in Git in human-readable format

#### **SHARE & UPDATE**

Retrieving updates from another repository and updating local repos

git remote add [alfas] [url] git remote vào kho chứa(reppo) nào

dung: git push/pull

add a git URL as an alias

git fetch [alias] pull =merge +fetch

fetch down all the branches from that Git remote

git merge [alias]/[branch]

merge a remote branch into your current branch to bring it up to date

qit push [alias] [branch]

ransmit local branch commits to the remote repository branch

git pull

fetch and merge any commits from the tracking remote branch

#### **TRACKING PATH CHANGES**

Versioning file removes and path changes

git rm [file]

delete the file from project and stage the removal for commit

git mv [existing-path] [new-path]

change an existing file path and stage the move

git log --stat -M

show all commit logs with indication of any paths that moved

#### **REWRITE HISTORY**

Rewriting branches, updating commits and clearing history

git rebase [branch] rebase # merge :rebase ko tao

apply any commits of current branch ahead of specified one

git reset --hard [commit]

clear staging area, rewrite working tree from specified commit

#### **IGNORING PATTERNS**

Preventing unintentional staging or committing of files

logs/

\*.notes pattern\*/

Save a file with desired patterns as .gitignore with either direct string matches or wildcard globs.

git config --global core.excludesfile [file]

system wide ignore pattern for all local repositories

#### **TEMPORARY COMMITS**

Temporarily store modified, tracked files in order to change branches

git stash

Save modified and staged changes

git stash list

list stack-order of stashed file changes

git stash pop

write working from top of stash stack

git stash drop

discard the changes from top of stash stack

### **GitHub** Education

Teach and learn better, together. GitHub is free for students and teachers. Discounts available for other educational uses.
